

## INFORMATION - CIAT Selection Software Update

CIAT offers a new way to update your selection software. Each software from now on is installed and managed independently of the others. This flexibility will facilitate and accelerate the diffusions (remote loading of less bulky packages, more frequent updates).

Thank you to strictly follow the instructions below:

1 - In order to be on the safe side, we advise you to copy your case studies if those are stored in the software installation directory. For example if you store your studies under c:\ciat\étude duplicate this directory in C:\temp\étude,

2 - Proceed to the desinstalment of the old software (control panel Add/Delete programs),

3 - On the site [www.ciat-share.com](http://www.ciat-share.com) select the reference of your distribution (ex: CD040 or CD943) and download all the update packages you need (one for each software). Your login and your password were communicated to you by your usual interlocutor (if it is not the case thank you to contact him),

4 - if you have several stations to update, burn the installation packages you downloaded on CD,

5 - Connect to the machine to update with an **administrator login**,

6 - Launch the installation of a first package,

7 - Check that the installed software runs properly (with the administrator's login and a user's login,

8 - One by one launch the instalment of the other softwares which you wish to use.

Items 1 and 2 concern only the people carrying out an update on a machine where the LST were already installed. For any further information or in the event of problem you can contact us: [softwaresupport@ciat.fr](mailto:softwaresupport@ciat.fr).
